MARUTHUVA PATHIVU

INTRODUCTION:

This application is used to book appointment for doctor consultation. My motive is to reduce waiting time for doctor consultation. In my application patient book a appointment request, that request sent to all the registered hospitals, which hospital first accept the appointment request sent by patient, after that selected hospital will send a appointment message to that patient , if the patient accept the hospital appointment they should confirm through the online payment, if the patient rejected the appointment sent by hospital, Again the appointment request message resend to all the other hospital except the selected one.

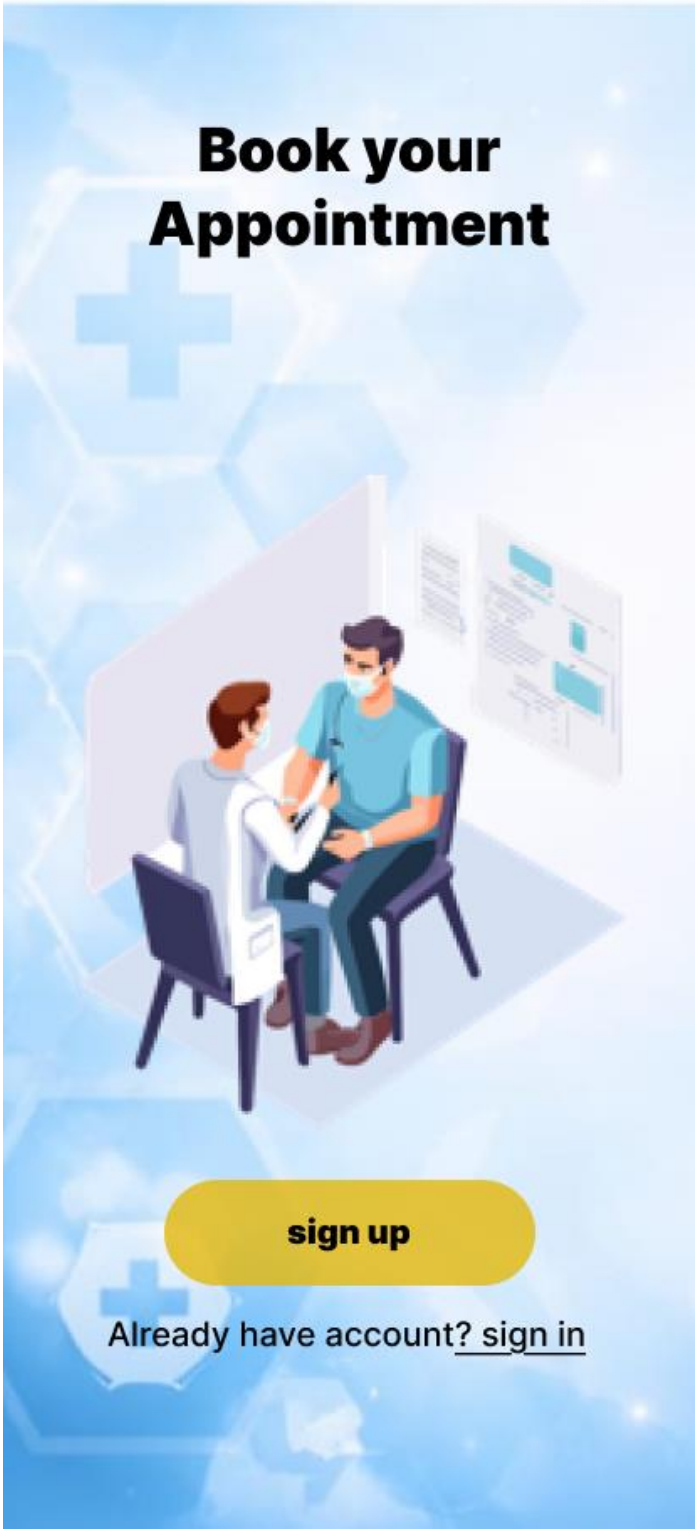

Types of user:

1. Hospitals
2. Patients
3. App Admin
